Listed Companies Cite Capital Markets as a Key Driver of Growth at TWSE's COMPUTEX 2026 Briefing

COMPUTEX 2026 concluded successfully on June 5. Taiwan Stock Exchange (TWSE) once again participated in this premier global technology event under the theme "Beyond the Exchange, Behind the World's AI," achieving significant results. Through a series of activities, including international media briefings, media interviews, and the TWSE Media Lounge, TWSE showcased how Taiwan's AI ecosystem and capital market work together to drive growth and innovation, further enhancing the international visibility of Taiwan's technology industry and capital market among global technology companies, media organizations, and investors.

During the exhibition from June 2 to 5, the TWSE established the TWSE Media Lounge at Nangang Exhibition Center. Through presentations highlighting the development of Taiwan's capital market, market capitalization growth, and visualizations of the AI supply chain, the Lounge provided a comprehensive overview of Taiwan's AI ecosystem and capital market achievements. The venue attracted hundreds of domestic and international financial and technology journalists, offering a valuable platform for media engagement and helping global audiences gain deeper insights into Taiwan's technological strengths and capital market development.

In addition, the TWSE hosted two media briefings on June 4, attracting representatives from dozens of influential international media organizations. The sessions featured executives from leading listed companies, including Alchip Technologies (3661), MSSCORPS (6830), Nanya Technology (2408), Unimicron Technology (3037), Asia Vital Components (3017), Delta Electronics (2308), and Wistron Corporation (3231). Speakers shared perspectives on Taiwan's technological advantages and growth strategies across semiconductor manufacturing, AI infrastructure, and data center applications, as demand for AI continues to accelerate worldwide.

Participating companies unanimously recognized the important role Taiwan's capital market has played in supporting corporate development. They highlighted how access to the public market has helped strengthen corporate governance, deepen investor relations, and provide funding for research and development as well as capital expenditures, serving as a key driver of sustainable growth. The companies also noted that the capital market has supported their ESG initiatives and sustainability efforts, further enhancing international competitiveness and investor confidence.

The TWSE stated that the continued expansion of global AI infrastructure demand further underscores the strategic importance of Taiwan's technology ecosystem. Looking ahead, the TWSE will continue to leverage its role as a key capital market platform by strengthening connections with international investors and enterprises, linking global capital with Taiwan's innovation capabilities, and helping companies expand internationally and capture emerging growth opportunities. Through these efforts, the TWSE aims to further strengthen Taiwan's position as a critical player in the global AI supply chain.
